1. Nmap Port Scanning

TODO - It ran in seconds...is that suspicious? Or just M2? - For 4, I presume we leave the httpd out after Apache, cos that's program, not software?

Working notes:

- 1. sS = TCP SYN scan; sV = OS/version detection/script scanning etc; T4 = quick scan; allports = ...

- Relevant websites: `https://nmap.org/book/man-version-detection.html` & `https://nmap.org/book`

2. Wireshark Packet Sniffing

TODO - For 4, I presume we leave the httpd out after Apache, cos that's program, not software?

Working notes:

- 1. sS = TCP SYN scan; sV = OS/version detection/script scanning etc; T4 = quick scan; allports = ...

- Relevant websites: `https://nmap.org/book/man-version-detection.html` & `https://nmap.org/book`
